MICIP Portfolio Report

MacDowell Preparatory Academy

Implementing MTSS to achieve student achievement

Status: ACTIVE

Statement: In spring 2026, 100% of students will meet their projected growth percentiles, as measured by NWEA MAP Growth Math and Reading assessments, using a MTSS Framework for tiered instruction.

Created Date: 07/18/2022

Target Completion Date: 06/30/2026

Data Set Name: Mathematics Benchmark

Name	Data Source
End of Year Data Report	NWEA

Data Story Name: MTSS District Goal

Initial Data Analysis: Data Analyzed:

- NWEA MAP Data: We used the data from the NWEA MAP assessments from both the 19-20 SY and the 20-21 SY. - MStep: We used the data from the MStep assessment the 18-19 SY.

- GPA: We used the GPA grades in math courses for both the 19-20 and 20-21 SY.

In summary, the data tells us that scholars in grades K-8 continue to struggle to reach mastery in Mathematics on the state and local assessments.

The number of scholars at or above the 50th percentile in Math on NWEA MAP for the 19-20 school year is 21. 21-22 School Year- 35

The percent of scholars scoring proficient and above on the Math portion of the MStep assessment for grades 3-8 during the 18- 19 SY is 8.

There is a gap between the NWEA MAP proficiency(21) and the percent proficient on the math portion of the MStep assessment (8).

The outliers in the data set are as follows: On the 2019 M-STEP math assessment, 21% of 3rd grade students scored advanced or proficient, compared to 5% in the other grades (4-8) combined. Of all of the students who scored proficient or advanced, 48% were 3rd graders.

In addition, course percentages for middle school math fall below those for English Language Arts. Over the last six measured quarters (19-20 Q1-Q3 and 20-21 Q1-Q3), the average middle school math percentage was six percentage points lower than the average ELA percentage.

Initial Initiative Inventory and Analysis: Since the beginning of MacDowell Preparatory Academy in 2016, our scholars have grown in mathematics but not at a rate that has yielded proficiency. Strategies from past years of the School Improvement Process have included the following.

1. I-Ready- This program was used as an intervention tool to connect to a scholar's personal NWEA score and created an individualized pathway to address gaps in scholar understanding.
 - a) The Academic Intervention team pulled small groups of students based on their NWEA Scores (20th percentile and lower three times per year) to work on individualized pathways using I-Ready Manual Practice Resources and guided small group instruction based on common learning targets from the NWEA Learning Continuum.
 - b) K-8th Math Intervention Pull Out Class was structured as a part of the school schedule in order for scholars to have protected time to get small guided group instruction and support with I-Ready Manual Folders based on their individualized academic needs.
 - c) K-8 I-Ready Lab was structured as a part of the school schedule twice per week in order for scholars to have protected time to get onto I-Ready and complete their technology based assigned folders
 - d) The process was closely monitored. Student progress was discussed monthly in PLC's with the Curriculum Coordinator.
2. Gaps/Challenges
 - a) One of the challenges were students who took long periods of time to complete the I-Ready Diagnostic. They could not be assigned a learning pathway without completion of the pre-assessment. Therefore, student consistency of working on pathways greatly varied.
 - b.) Scholars in K-8 went to this course twice a week for 50 minutes. 6-8 had less time than in their I-Ready Elective due to less efficient transitions. Students were allowed to transition independently, which led to chronic tardiness.
 - c.) Scholars in K-8 math intervention (20th percentile and lower) had a double block of Math. 6-8 Students were allowed to transition independently, which led to chronic tardiness.
3. Professional Development- Math focused PD was established in order to ensure that teachers had adequate time to unpack and plan robust lessons according to priority standards (M-Step) and learning targets(NWEA)
 - a) Each week, time was set aside to ensure that teachers were remaining aligned to the identified coverage of priority standards and lesson targets based on quarterly data dives.
 - b) Monthly, the staff would partake in guided discussions around instructional pacing, wins and challenges in order to adjust lesson delivery based on student progress.
 - c) Teachers received weekly feedback on math lesson plans, which were checked for fidelity and levels of student engagement.
4. Small Group Instruction- This became a focus to use scholar data to pull groups and close scholar gaps.
 - a) K-5 adopted the Daily 3 Math Workshop framework, daily. This course was co-facilitated by the Curriculum Coordinator and teacher as an instructional modeling opportunity. The challenge was that the Daily 3 Cafe concept was new to teachers. Therefore, their planning for foundational work was challenging as an everyday component of their lesson planning.
 - b) Direct Instruction would prove to be challenging because of the lack of teacher training using the actual identified math curricular resources throughout the school year from the Curriculum Coordinator and/or Publishers of the resources. They spent a lot of time using trial and error to deliver instruction to the whole group, which was not an effective strategy

for reaching students academically. Therefore, small group instruction and differentiation was not prevalent.

5. Paraprofessionals- The role of paraprofessional was put in place as a Tier 2 strategy of our MTSS structure. Paras mainly pushed in to assist during small group instruction time

- a) Two paraprofessionals were shared among the entire K-8 team. An equitable schedule was created by the instructional team in order to ensure that there were no scheduling conflicts. Middle school use of paraprofessionals were less effective due to their lesson
- b.) Professional development for paraprofessionals was minimal this school year. We focused on maintaining the following; implementing their push in support schedule with fidelity, affording teachers support with I-Ready as they progress monitored and assisted with small group instructional assistance with scaffolding tier 1 standards. The challenge was the lack of professional development in the areas of small group instructional strategies, navigating the I-Ready Platform for troubleshooting and understanding assigning/reporting and creating formative assessments to monitor student progress. The paraprofessionals were brought in semester 2.

6. Data Driven Instruction- Using scholar data in order to plan instruction and identify gaps has been a focal point in all content areas since the beginning of our work at MacDowell. We recognize the importance of looking at scholar data to best determine how content should be delivered to scholars.

- a) Implemented protocols around analyzing scholar data and planning for reteaches of standards not mastered. Teachers stated that at times, there was not enough time to both reteach and move into new content which pushed pacing behind.

- b) Bi-weekly assessments were implemented during the 21-22 school year and have continued to be a source of real time data. However, at the beginning of the year during the height of restoration from the pandemic, it was more challenging to ensure accurate completion/responses from scholars given learning from home.

- c) The Curriculum coordinator would progress monitor bi-weekly assessments to ensure they were being implemented with fidelity with grade level teams during professional learning community meetings. They would determine a re-teach, review or move forward two week plan. Each plan was archived and revisited at the top of each Tier 1 meeting. The gap was the formative assessments that had to be teacher created for lower levels on Bloom's Taxonomy due to the lack of formative assessment building professional development for the staff. Because MPA enlisted a 100% new instructional team, which consisted of 98% non-certified instructors, the majority of professional development had to be focused on year one, routine teaching strategies for effective implementation.

7. Math Instructional Coaching- Our Coaching model was a cycle of observation and feedback as well as data meetings.

- a.) With novice teachers, instructional coaching most time focused on management vs rigor especially during the 21-22 school year.

- b.) Bi-weekly assessments were implemented during the 21-22 school year. The focus of the instructional coaching team surrounded recommendations for how to diversify their instructional delivery for better results on assessments.

8. Parent SIP Events- We hosted various Math Nights and Literacy Nights during the 18-19 and 19-20. In 2021-22, math and literacy nights were not implemented as a safety

precaution for Covid-19.

9. Summer School- We have hosted Summer School since 2016.

a.) Attendance is a challenge. Students who were identified as summer school candidates have attended at a rate of around 75%. However, 90%, or better attendance would be the marker to impact academic achievement during such a short program.

b.) We designed a targeted program based on Spring NWEA Learning Targets. However, our program was only 4 weeks in length for a half day so there was not a great amount of time to close huge academic gaps.

10. Class Size Reduction Teacher- This strategy was selected in order to group students for differentiation purposes.

a.) There was a lack of strong gains in these classrooms due to teachers' limited knowledge base for differentiation strategies.

b.) Lack of certified teachers with formal training.

Gap Analysis: While we would like our Math proficiency rates to grow by 10% according to NWEA and M-Step. We exceeded that growth percentage compared to the previous year by 5%. The percentage of students who met their NWEA Projected Rit Goals was set for 7%. We exceeded that goal by three times this school year. The grade level proficiency rate stands between 25-30% currently. Our goal is to be in the range of 35-40% next school year.

District Data Story Summary: We had many successes this school year. One of our greatest wins this year was implementing a foundational MTSS Academic Program for tiers 1-3 with fidelity. Our data analyzation process of identifying priority standards and lesson targets with every NWEA assessment. The percentage of teachers who embraced and implemented the plan with fidelity was at about 80%. The embedded academic intervention hour and I-Ready Elective ensured that all students received work around their achievement gaps throughout the week. Our weekly meeting cycles to discuss tier 1 instruction and student progress, tier 2 academic interventions relating to Daily 3 Cafe and small group instruction were done with fidelity and guided instruction was extremely effective. The protected time carved out each week to address staff; as a whole group for building school-wide alignment of practices, in grade levels for building professional learning communities and individual meetings with instructional coaches for individualized coaching in areas of need made the instructional program increasingly effective because EVERY instructor was receiving support. The academic intervention plan was also very effective because interventionists were able to implement their schedules without interruptions such as subbing. Their program was protected to ensure that students received scheduled support based on their needs. A new Child Study Team Process was introduced in semester two to more closely monitor tier 3 student progress in collaboration with the special education team. This process will be even more pronounced and introduced at the beginning of the school year in order to identify scholars who may be struggling, or on a course toward special education to receive individualized interventions early in the school year.

Though our data indicated that even with small gains in mathematics proficiency, our scholars are still ranking below the local and national averages. Scholars have exhibited a

good amount of growth, which is closing the proficiency gap. However, we are still not at a stable rate of proficiency as a school. Intervention services were successfully implemented in tiers 2-3 along with the I-Ready Elective. These services must continue to push forward becoming even more CONSISTENT, targeted and focused next school year. Tardiness will be addressed for 6-8th grade by teachers walking students to and from I-Ready Elective and Academic Intervention classes. A more robust MTSS Tier 3 Child Study process will be introduced earlier and progress monitored more closely next school year.

We have several supports in place such as; a new teacher certification program, which will be introduced this upcoming school year, school wide instructional coaching, embedded academic intervention hour, academic small group intervention, math small group instruction (Daily 3 Cafe), tier 2 paraprofessionals, I-Ready Elective, MTSS coordination and oversight, attendance agent to support decreasing student absences, two Deans of Culture and Climate and weekly embedded staff professional developments for guided planning and think tanks. All of these supports will be in place next school year and taken to the next level of implementation.

The new teacher program will provide the needed pedagogical support lacking with the non-certified instructional team. The embedded academic intervention hour will remain in place. However, paraprofessionals will focus on push-in support in K-5, which was extremely successful last year. Teachers will be provided with PD around Daily 3 and small group instructional strategies as a component of our PD Plan. Academic interventionists will receive professional development on a monthly basis to ensure they are using best practices to close achievement gaps with tier 3 students (20th percentile and lower who are targeted in the Child Study Process). There will be an MTSS Coordinator who will support the identification of scholars, support the Child Study Team with data, progress monitor student progress and attendance, monitor learning pathways, designate allowable instructional resources aligned with the programming and report progress to leadership on a regular basis. I-Ready Math and ELA Elective should be scheduled daily for all students. This will mean bringing on an additional I-Ready instructor/Facilitator whose main area focus will be math. Teachers will continue to receive instructional coaching with a feedback cycle to support implementation. Deans of Culture and Climate will transition more of their time supporting teachers with best practice strategies for the classroom and programs such as Restorative Practices as proactive, positive behavior supports for students. Embedded professional development cycle will be more targeted and focused this upcoming year. There will be increased time to implement practices presented in order to determine what's working/not working and identify instructional support gaps based on need. Progress monitoring will increase to ensure the stability of best practice implementation.

Analysis:

Root Cause

Five Whys

- Why: Analyze Root Cause - Why are things the way they are? Answer these questions:
 1. What tool(s) did you use to analyze root cause?
 2. What root cause did you discover that is within your control and that you will address in your challenge statement?
 3. What supporting documentation do you have?

Why- Why are our scholars not proficient on the Math MStep? Our scholars lack the foundational skills to engage in rigorous math content.

Why- Why do scholars lack the foundational skills necessary to excel on rigorous math content? There has been a disparaging achievement gap from students in the Metro Detroit Area for years. Those gaps could have been created based on staffing challenges, curriculum resources, lack of training for teachers, student attendance, low rates of parent support, etc. These conditions have been prevalent in our community for a great number of years. Now we return from a pandemic and students are even more behind. This is highly due to receiving instruction on new remote platforms they had never experienced before by students and/or teachers.

Also, the MacDowell Instructional team is highly composed of non-certified instructors due to certified teacher shortages in our area. Therefore, they lack the pedagogical exposure and experience to implement strategic tools to create more rigorous, differentiated math instruction aligned to the Michigan Common Core Standards. This is the main reason MacDowell elected to bring in a team of experienced, certified, highly qualified instructional coaches to closely guide the instructional practices. More time with I-Ready would be beneficial as well.

Why- Why are the math intervention courses not yielding more academic growth in math? The trajectory of growth is on an upswing related to the academic intervention program. However, more small group instruction and differentiation training is needed for teachers to support interventions for all scholars in their classrooms. Professional development from the Math Curriculum Providers is necessary in order for teachers to properly use all of the resources available for scholars on all levels. If teachers are only teaching using the main resource and not utilizing the supplemental materials to support scholars who are struggling, they will not close achievement gaps. Also, more time is need on I-Ready in order for students to work on their individualized pathways.

Why- Why do we not have strong supports for scholars who fall into needed Tier II or Tier III interventions? We have created an aligned academic intervention program. However, we need more interventionists due to the number of students who are in need of interventions. We also need an additional I-Ready Facilitator so students can work on their individualized pathways on a daily basis. Finally, teachers need small group

instruction and differentiation professional developments to support the overflow of non-proficient students.

Why- Why have we not created a strong Tier II and Tier III support system for scholars who are struggling? With the new administration and instructional support team, we have developed and implemented a strong foundation for a Multi-tiered System of Support(MTSS) for struggling students. Our next phase will be to bring in more targeted support staff to facilitate interventions, an additional I-Ready Facilitator so students spend more time with their learning pathways and a more robust Child Study Process to closely monitor struggling students and needed interventions.

Potential activities to consider when identifying our systems approach:

Tier 1 PD to address effective small group instruction
 Tier 1 PD to address differentiated instructional practices
 Tier 1 PD to increase teachers' knowledge of how to consistently review data to drive instruction
 Tier 2 PLC's for interventionists and teachers to collaborative and consistently review student work and progress in order to fill achievement gaps as a team
 Tier 2 interventions in the classroom with paraprofessionals to support small group instruction
 Tier 2 interventionists and paraprofessional professional development calendar geared toward tutoring struggling students
 Tier 3 Child Study Process implemented with fidelity for evidence collection, strategic sharing of data and implementing even smaller group instructional practices
 Root Cause: We have not built out a strong MTSS program that aligns all of our activities to better support our struggling scholars.

- Why: Root Cause: We have not built out a strong MTSS program that aligns all of our activities to better support our struggling scholars.

Challenge Statement: If we establish a shared equitable mindset and coordinated systemic process to address gaps and support scholars with their missing math and literacy foundational skills with fidelity, then student proficiency on state and local assessments will show increased mastery and proficiency, better preparing scholars for success in high school and in life.

Strategies:

(1/7): MTSS Framework (General)

Owner: Darah Griffin

Start Date: 07/18/2022

Due Date: 06/30/2026

Summary: "A Multi-Tiered System of Supports (MTSS) is a comprehensive framework comprised of a collection of research-based strategies designed to meet the individual needs and assets of the whole child at all achievement levels. MTSS intentionally interconnects the education, health, and human service systems in support of learners, schools, centers, and community outcomes. The five essential components of MTSS are inter-related and complementary. Implementation of the essential components as intended provides educational settings with a framework to organize the strategies and processes needed to support successful learner outcomes. The five essential components include the following: Team-Based Leadership; Tiered Delivery System; Selection and Implementation of Instruction, Interventions and Supports; Comprehensive Screening & Assessment System; Continuous Data-Based Decision Making

(2/7): 23g Intensive, Individualized Support

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: A trained adult advocate can help students who have fallen off track by providing individualized support to meet their academic, personal, and emotional needs. An advocate is a student’s “go-to person” for the resources and support needed to graduate, and typically provides these supports for the entire time a student is enrolled in the school, or, at a minimum, for a full school year. Advocates can be school staff or not employed by the school district. Advocates can identify unmet needs and provide or coordinate more intense, individualized support to help students get back on track for graduation.

(3/7): 23g Expanded Learning Time

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: EdTrust defines expanded learning time (ELT) as programs or strategies implemented to increase the amount of instruction and learning students experience. ELT strategies include afterschool, summer, and in-school programs. The evidence suggests that extended learning time programs, including extended school day (ESD), extended school year (ESY), and expanded learning opportunities (ELO) programs that provide academic services during out-of-school time hours, can be effective in improving a range of educational outcomes for students. Findings also suggest that extended learning time programs may be more advantageous for low-income, low-performing, ethnic minority or otherwise disadvantaged students.

Activity Buildings: All Buildings in Implementation Plan

(4/7): 23g Tutoring

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: Tutoring, defined as supplemental one-on-one or small group instruction, can be a powerful tool for accelerated learning. Tutoring is an effective intervention because tutoring:

- customizes learning to target a student’s immediate learning needs.
- provides additional instructional time by aligning the tutoring activities to current classroom activities.
- offers more engagement, rapid feedback, and less distractions in one-on-one and small group environments.
- creates meaningful mentor relationships.

(5/7): 23g Personalized Learning Environments

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: A personalized learning environment creates a sense of belonging and fosters a school climate where students and teachers get to know one another and can provide academic, social, and behavioral encouragement. Reforms aimed at creating smaller school environments have been found to be associated with more positive student achievement, school climate, school attendance, and graduation rates. Efforts can include team teaching, 9th grade academies, thematically based small learning communities, or smaller classes.

(6/7): Curriculum Planning

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: Curriculum planning supports districts and schools by supporting teachers to implement curriculum in ways that supports all students to reason and problem solve. Within each lesson, teachers identify and modify tasks (as outlined by the National Council of Teachers of Mathematics) to support students' exploration, collaboration, and reasoning and problem solving related to the identified learning target. As tasks are identified/modified, they are housed within a district-level curriculum document that supports all teachers within the district to implement the district adopted text in ways that aligns with standards- and evidence-based instruction in mathematics.

(7/7): Early Warning Intervention and Monitoring System (EWIMS)

Owner: Darah Griffin

Start Date: 11/09/2023

Due Date: 06/30/2026

Summary: EWIMS is a systematic approach to using data to identify students who are at risk of not graduating on time, assign students flagged as at risk to interventions, and monitor at-risk students’ response to intervention. The EWIMS model provides schools with guidance to implement a seven-step process, supported by the use of an early warning data tool. The tool uses validated indicators, based on prior research, to flag students who are at risk of not graduating on time (Heppen & Therriault, 2008; Therriault, Heppen, O’Cummings, Fryer, & Johnson, 2010) and allows schools to assign students to interventions and monitor their progress. The indicators used to flag at-risk students in the tool are chronic absence (missed 10 percent of instructional time or more), course performance (failed any course, grade point average [GPA] below 2.0), behavioral problems (suspended once or more), and an off-track indicator (failed two or more semester-long or three or more trimester-long core courses or accumulated fewer credits than required for promotion to the next grade). The EWIMS model is intended to help schools efficiently use data to identify at-risk students and provide targeted supports.
